## Cyber Threat Management

Issued by [Cisco](#)

Cisco verifies the earner of this badge successfully completed the Cyber Threat Management course. The holder of this student-level credential is familiar with cybersecurity policies and governance to ensure an organization complies with ethics standards and legal and regulatory frameworks. They understand how to do a network vulnerability assessment and create a risk management plan, as well as post-incident response.

[Common Vulnerability Scoring System \(CVSS\)](#)[Disaster Recovery](#)[Evidence Handling And Attack Attribution](#)[Governance](#)[Incident Response](#)[Network And Server Profiling](#)[Penetration Testing](#)[Risk Assessment](#)[Risk Management](#)[Secure Device Management](#)[Security Assessments](#)[Security Controls](#)[The Cyber Kill Chain](#)[The Diamond Model Of Intrusion Analysis](#)[Threat Intelligence Services](#)

## Certificate of Course Completion

Erwyn Abnasan

has successfully achieved student level credential for completing  
the Cyber Threat Management course.

The student was able to proficiently:

- Explain why organizations must conform with specific compliance frameworks according to institutional context.
- Evaluate network and systems vulnerability.
- Given an organizational context, create a vulnerability assessment plan by identifying and describing relevant threats.
- Explain how IT systems vulnerability is assessed.
- Select security controls based on organizational relevance and create a risk management plan.
- Explain how organizations recover from cybersecurity exploits.
- Given organizational contexts, recommend disaster recovery and incident response activities.
- Explain how forensic investigations of internal and external security incidents are performed.
