DIFFERENT KINDS OF MODULES OF ERP (Enterprise resource planning)

Inventory management

Inventory Management allows manufacturers to gain real-time inventory information and manage all aspects of the business on one platform. This includes finance, planning, logistics, and operations.

Order management system

Order management is simply the process of efficiently tracking and fulfilling sales orders. It includes the cycle of people, processes, and suppliers to create a positive customer experience.

Sales management

Sales management is the process of developing a sales force, coordinating sales operations and implementing sales techniques that allow a business to consistently hit, and even surpass, its sales targets. If your business brings in any revenue at all, a sales management strategy is an absolute must.

Marketing automation

Marketing automation is software that handles routine marketing tasks without the need for human action. Common marketing automation workflows include email marketing, behavioral targeting, lead prioritization, and personalized advertising.

Finance and accounting

Financial accounting is a particular type of accounting that includes a method of documenting, summarizing, and reporting the transactions arising from business operations for a period of time.

Finance ERP module

Enterprise resource planning (ERP) is a software system that helps you run your entire business, supporting automation and processes in finance, human resources, manufacturing, supply chain, services, procurement, and more.

Ecommerce

E-commerce Sentence Examples. If you'd like your business to be online, visit E Commerce to start the process. Develop methods for managing change within the e commerce context. E-commerce means that you can buy script access products online.

Professional services automation

PSA in technology, which is defined as professional services automation, is a technology that helps services organizations optimize project accounting, resource scheduling, project management and advanced analytics to support growth.

Management information system

An MIS is a system that provides managers with the necessary information to make decisions about an organization's operations. The MIS gathers data from various sources and processes it to provide information tailored to the managers' and their staff's needs.

Business intelligence

Business intelligence combines business analytics, data mining, data visualization, data tools and infrastructure, and best practices to help organizations make more data-driven decisions.
